

Community Generation Project Incubator

If developing larger renewable energy projects is a strategic goal for your community, then our two-day incubator is not to be missed!

- The Incubator program offers a strong foundation in Community Generation literacy, helping to demystify the critical steps to develop a viable project, generate renewable energy and sustainable revenue, and deliver benefits to your community.
- Working with industry leaders, attendees will gain clarity on the Environmental, Grid, Regulatory, and Stakeholder engagement and assessment processes to save the project money and get started quickly on the right foot.
- Project financing approaches, including local capital strategies, will also be covered.
- Six project candidates per workshop will participate in project selection coaching, key data gathering, and collaborate with experts and peers to generate a high-level pre-feasibility assessment.

Interested? Check out the Project Incubator website (<http://acca.coop/events/>) to register and apply for a Project Candidate Assessment and Development Coaching Call. This initial consultation will be used to identify project possibilities and key data to qualify the opportunity, identify fatal flaws, and determine project potential at a qualitative level.

Overview: Workshop includes training, networking, expert inquiry, case-studies and collaborative development.

Topics include:

- Alberta Electricity 101
- Renewable Technology Overview
- Environmental Requirements
- Stakeholder Engagement
- Regulatory Framework
- Small Scale / Community Generation Regulation
- Grid Interconnection
- Financial Modeling

Who is eligible to attend?

**Municipalities, Counties, First Nations, Métis Settlements
Schools & Post-Secondary Institutions, Charities & Non-Profits
Co-operatives, Irrigation Districts & Agricultural Societies
Condo Boards, Industry Associations, Rural Electrification Associations**

Registration is limited to 20 attendees and six (6) project candidates.

Open to organizations seeking only training opportunities.

Three Available Workshops:

Calgary - June 11th & 12th

Lethbridge - July 10th & 11th

Edmonton - September 25th & 26th

Target Projects: Grid Scale, Pre-Feasibility Stage, Solar emphasis and applicable to all renewable energy technologies

Outcomes: A clear project development path. Savings towards pre-feasibility and overall project costs. Confidence in issuing requests for proposals and working with developers. Strategies for capital raising and financial sustainability.
